# Weekly Petroleum Status Report

Data for Week Ended:  
September 19, 1986

Weekly Petroleum Status Report (WPSR) provides early information on the petroleum supply situation in the context of historical information, selected prices, and forecasts. The WPSR is intended to provide up-to-date information to the industry, the press, planners, policymakers, consumers, analysts, State and local governments. It is published on Thursday by the Energy Information Administration (EIA). The data contained in this report are based on company submissions for the week ending 7 a.m. the preceding Friday.

This publication is available on an annual subscription basis from the Superintendent of Documents, U.S. Government Printing Office (GPO). Ordering information and purchase of this and other publications may be obtained from the GPO or the U.S. National Energy Information Center (NEIC).

Questions on energy statistics should be addressed to NEIC. Addresses and telephone numbers appear on page 2.

\* IMPORTANT NOTICE \*  
\*  
\* As required by Government regulation, the Energy Information Administration (EIA) is conducting a  
\* periodic review of its publications mailing list. If you are on the EIA mailing list, we will  
\* soon be sending you an important postcard. You must return it to us by November 14, 1986 to stay  
\* on the EIA mailing list. If you have not received the postcard by October 31, 1986, please  
\* contact the National Energy Information Center at 202-252-8800.  
\*  
\* NOTE: This notice does not apply to subscriptions which have been purchased from the Government  
\* Printing Office (GPO).  
\*\*\*\*\*

## HIGHLIGHTS

### Refinery Activity

Crude oil input to refineries averaged 13.4 million barrels per day for the four weeks ending September 19, 1986. Refinery capacity utilization averaged 87.5 percent during the period. During the four weeks ending September 19, 1986, motor gasoline production averaged 7.1 million barrels per day and distillate fuel oil production averaged 3.0 million barrels per day.

### Stocks

In September 19, 1986, stocks of crude oil (excluding the Strategic Petroleum Reserve) stood at 329.5 million barrels, about 4 percent above the level one year ago. Stocks of total motor gasoline, at 231.7 million barrels, were about 4 percent above the level one year ago. Distillate fuel oil stocks stood at 145.8 million barrels, about 26 percent above the level one year ago. Stocks of residual fuel oil, at 41.0 million barrels, were about the same as the level one year ago.

### Imports

Net imports of crude oil (including imports for the Strategic Petroleum Reserve) and petroleum products together averaged 6.2 million barrels per day for the four weeks ending September 19, 1986, about 51 percent above the average a year ago. Net imports during the first 261 days of 1986 averaged 5.0 million barrels per day, about 23 percent above the average for the same period last year. Gross imports of crude oil (excluding the Strategic Petroleum Reserve) averaged 4.8 million barrels per day for the four-week period ending September 19, 1986.

### Products Supplied

Total petroleum products supplied averaged 16.1 million barrels per day for the four-week period ending September 19, 1986, which is about 4 percent above the rate supplied a year ago. Motor gasoline was supplied at a rate of 7.0 million barrels per day, which is about 2 percent above the rate supplied a year ago. Distillate fuel oil was supplied at a rate of 2.6 million barrels per day, about 2 percent below the rate supplied a year ago.

### World Crude Oil Price

The weighted average international price of crude oil as of September 23, 1986, is estimated to be \$13.24 a barrel, a decrease of 63 cents from the previous week.

### Spot Market Product Prices

For the week ending September 19, 1986, the average spot market price of 98 octane gasoline on the Rotterdam market decreased 41 cents to \$20.52 a barrel; the gasoline price decreased \$1.14 to \$15.75 a barrel, and the price of residual fuel oil decreased \$1.05 to \$11.79 a barrel.

In the New York market, the average spot price of 89 octane regular leaded gasoline decreased 94 cents to \$17.33 a barrel; the price of No. 2 heating fuel remained unchanged at \$16.59 a barrel, and the price of residual fuel oil decreased \$1.30 to \$12.20 a barrel.

E=Estimate based on monthly data.

<sup>1</sup> Includes lease condensate.

<sup>2</sup> Net Imports = Gross Imports (line 3) + SPR Imports (line 4) - Exports (line 5).

<sup>3</sup> Includes finished petroleum products, unfinished oils, gasoline blending components, and natural gas plant liquids for processing.

<sup>4</sup> Includes an estimate of minor product stock change based on monthly data.

<sup>5</sup> Includes crude oil product supplied, natural gas liquids, liquefied refinery gases, other liquids, and all finished petroleum products except motor gasoline, jet fuels, and distillate and residual fuel oils.

<sup>6</sup> Includes crude oil in transit to refineries.

<sup>7</sup> Included are stocks of all other oils such as aviation gasoline, kerosene, natural gas liquids (including ethane), aviation gasoline blending components, naphtha and other oils for petrochemical feedstock use, special naphthas, lube oils, wax, coke, asphalt, road oil, and miscellaneous oils.

For the current two weeks, stocks of these minor products are estimated from monthly data. (See Glossary: Stock Change (Refined Products)).

Note: Due to independent rounding, individual product detail may not add to total. The percentages shown are calculated using unrounded numbers.

E=Estimated. See Glossary for definition of "Stock Change (Refined Products)" for explanation of other oils estimation methodology.

<sup>1</sup> Product stocks include those stocks held at refineries, in pipelines, and at major bulk terminals. Stocks held at natural gas processing plants are included in "Other Oils" and in totals. All stock levels are as of the end of the period.

<sup>2</sup> Crude oil stocks include those stocks held at refineries, in pipelines, in lease tanks, and in transit to refineries, and do not include those held in the Strategic Petroleum Reserve.

<sup>3</sup> Included are stocks of all other oils such as aviation gasoline, kerosene, natural gas liquids (including ethane), aviation gasoline blending components, naphtha and other oils for petrochemical feedstock use, special naphthas, lube oils, wax, coke, asphalt, road oil, and miscellaneous oils.

Note: Data may not add to total due to independent rounding.

# Stocks

Crude Oil and Petroleum Products, U S Total<sup>1</sup>  
(Million Barrels)

Crude Oil, U.S. Total<sup>1</sup>  
(Million Barrels)

<sup>1</sup> Excludes stocks held in the Strategic Petroleum Reserve and includes crude oil in transit to refineries.

<sup>2</sup> Average level and width of average range are based on three years of monthly data: January 1983–December 1985. The seasonal pattern is based on seven years of monthly data. See Appendix B for further explanation.

<sup>3</sup> The observed minimum for total stocks in the last 36-month period was 981.5 million barrels, occurring in April 1986. See Appendix B for further explanation.

<sup>4</sup> The National Petroleum Council (NPC) defines the Minimum Operating Inventory as the inventory level below which operating problems and shortages would begin to appear in a defined distribution system. In its 1983 study, the NPC estimated this inventory level for crude oil to be 285 million barrels. See Appendix B for further explanation.

Residual Fuel Oil, U.S. Total  
(Million Barrels)

Residual Fuel Oil by Petroleum Administration for Defense District  
(Million Barrels)

<sup>1</sup> Average level and width of average range are based on three years of monthly data: January 1983–December 1985. The seasonal pattern is based on seven years of monthly data. See Appendix B for further explanation.

<sup>2</sup> The observed minimum for residual fuel oil stocks in the last 36-month period was 35.9 million barrels, occurring in April 1986. See Appendix B for further explanation.

Estimate based on most recent monthly data available.

Includes exports of crude oil and refined petroleum products. Exports of crude oil are prohibited by law, except to Canada. Crude oil and petroleum products shipped from the U.S. to its territories such as Puerto Rico, Virgin Islands, and shipments to the Hawaiian Foreign Trade Zone are included in export statistics.

\* Detail data may not add to total due to independent rounding.

NA=Not Applicable.

<sup>1</sup> Primarily official sales prices through January 1, 1986. Since the beginning of 1986, the data represent estimated contract prices based on government-stated prices, netback deals, and spot market quotations; FOB at the foreign port of lading except where noted; 30 day payment plan except where noted. See Appendix D for calculation of world oil prices.

<sup>2</sup> Estimated netback price for feeder crudes to a Rotterdam cracking refinery. The netback price is an estimated price equal to the gross product value of Rotterdam spot cargo prices minus an estimate of refining costs and transportation costs.

<sup>3</sup> Also called Sumatra Light.

<sup>4</sup> Average prices (FOB) weighted by estimated export volume.

<sup>5</sup> On 60 days credit.

<sup>6</sup> Price (CIF) to Northwest Europe; also called Urals.

<sup>7</sup> Average prices (FOB) weighted by estimated import volume.

Source: See Sources Section of this publication.

World Crude Oil Price<sup>1</sup>  
(Dollars per Barrel)

<sup>1</sup> Average price (FOB) of internationally traded oil only, weighted by estimated export volume.

Note: The shaded area of the graph indicates that the first quarter of 1986 was a transition period from official contract prices to market related contract prices. Before 1986, government-controlled official sales prices were used as the primary indicator of actual crude oil prices paid by contract customers. Since the beginning of 1986, three market related pricing mechanisms have dominated sales. These are netback arrangements (see footnote 2 for world crude oil price table on preceding page); spot crude oil sales; and government announced selling prices. As of March 11, 1986, assessments of prices determined by these mechanisms are being employed as the best indicators of actual crude oil prices.

# Spot Market Product Prices

Rotterdam Market  
Dollars per Barrel)

**WEATHER SUMMARY**  
(Population Weighted Cooling Degree Days<sup>1</sup>)

Weather data reported in the Weekly Petroleum Status Report are now taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce.

The weather for the nation, as measured by population-weighted cooling degree-days from January 1, 1986 through September 20, 1986, has been the same as normal and 2 percent warmer than last year.

**U.S. TOTAL COOLING DEGREE DAYS (Population Weighted) and by CITY**

### EIA WEEKLY DATA: SURVEY DESIGN AND ESTIMATION METHODS

The Weekly Petroleum Reporting System (WPRS) comprises five surveys: the "Weekly Refinery Report" (EIA-800); the "Weekly Bulk Terminal Report" (EIA-801); the "Weekly Product Pipeline Report" (EIA-802); the "Weekly Stocks Report" (EIA-803); and the "Weekly Imports Report" (EIA-804). The EIA weekly reporting system, the Petroleum Supply Reporting System, was designed to collect data similar to those collected monthly. WPRS, selected petroleum companies report weekly data to EIA on crude oil and petroleum product stocks, inputs and production, and crude oil and petroleum product imports. On the Forms EIA-800 through EIA-804, companies report data on a custody basis. On the Form EIA-804, the importer of record reports each week entering the United States. Current weekly data and the most recent monthly data are used to estimate published weekly totals.

#### Sample Frame

The sample of companies that report weekly in the WPRS was selected from the universe of companies that report monthly. All sampled companies report data only for facilities in the 50 States and the District of Columbia. The EIA-800 sample frame includes all petroleum refineries in the United States and its territories, facilities that have crude oil distillation capacity and produce some refined petroleum products, and bulk terminals that blend motor gasoline. The EIA-801 sample frame includes all bulk terminal facilities in the United States and its territories that have total bulk storage capacity of 50,000 barrels or more, and that receive petroleum products by tanker, barge, or pipeline. The EIA-802 sample frame includes all petroleum product pipeline companies in the United States and its territories that transport refined petroleum products, including interstate, intrastate, and intracompany pipeline movements. Pipeline companies that transport natural gas liquids are not included in the EIA-802 frame. Only those pipeline companies which transport petroleum products covered in the weekly survey are included. The EIA-803 sample frame consists of all companies that carry or store crude oil of 1,000 barrels or more. Included are gathering and trunk pipeline companies (including interstate, intrastate and intracompany pipelines), crude oil producers, terminal operators, and companies of crude oil, and companies transporting Alaskan crude oil by water. The EIA-804 sample frame includes all importers of record of crude oil and petroleum products into the United States.

#### Sampling

The sampling procedure used for the weekly system is the cut-off method. In the cut-off method, companies are ranked from largest to smallest on the basis of the quantities reported during some previous period. Companies are chosen for the sample beginning with the largest and adding companies until the total sample covers a specified percent of the total for each item and each geographic region for which weekly data are published.

	Refiners (Refineries)	Bulk Terminals	Product Pipelines	Crude Oil Stock Holders	Imports
Weekly Form	EIA-800	EIA-801	EIA-802	EIA-803	EIA-804
Monthly Frame Size	152(252)	323	90	181	124
Weekly Sample Size	60(152)	74	52	85	97

#### Collection Methods

Data are collected by mail, mailgram, telephone, Telex, and Telefax on a weekly basis. All canvassed firms file by 5:00 p.m. on the Monday following the close of the report week, 7 a.m. Friday. During the processing week, company corrections of the prior week's data are also entered.

#### Estimation and Imputation

After the company reports have been checked and entered into the weekly data base, explicit imputation is used for companies which have not yet responded. The imputed values are exponentially smoothed means of recent reported values for this specific company. The imputed values are treated like reported values in the estimation procedure, which calculates ratio estimates of the weekly totals. First, the current week's data for a given product reported by companies in a geographic region are summed. (Call this weekly sum,  $W_t$ ). Next, the most recent month's data for the product reported by those same companies are summed. (Call this monthly sum,  $M_t$ ). Finally, let  $M_s$  be the sum of most recent month's data for the product as reported by all companies. Then, the current week's ratio estimate for that product for all companies,  $W_t$ , is given by:

$$W_t = \frac{M_t}{M_s} \cdot W_s$$

This procedure is used directly to estimate total weekly inputs to refineries and production. To estimate total weekly outputs of finished products, the preceding procedure is followed separately for refineries, bulk terminals, and pipelines. Total estimates are formed by summing over establishment types.

Weekly imports data are highly variable on a company-by-company basis or a week-by-week basis. Therefore, an exponentially smoothed ratio has been developed. The estimate of total weekly imports is the product of the smoothed ratio and the sum of the weekly reported values and imputed values. Imports of other oils include adjustment from Census data for unlicensed products because of coverage differences between the monthly survey data and Census data.

## Response Rates

The response rate as of the day after the filing deadline is about 80 percent for the EIA-800; 75 percent for the EIA-801; 95 percent for the EIA-802; 80 percent for the EIA-803 and greater than 95 percent for the EIA-804. However, more forms are received the next day, bringing the final response rates up. Late respondents are contacted by telephone. Nearly all of the major companies report on time. The nonresponse rate for the published estimates is usually between 2 percent and 5 percent.

## Appendix B

### INTERPRETATION AND DERIVATION OF AVERAGE INVENTORY LEVELS

The national inventory (stocks) graphs for total petroleum products, crude oil, motor gasoline, distillate fuel oil, and residual fuel oil in this publication include features to assist in comparing current inventory levels with past inventory levels and with judgements of critical levels. Methods used in developing the average inventory levels and minimum operating levels are described below.

#### Average Inventory Levels

The charts displaying inventory levels of crude oil and petroleum products (p.7), crude oil (p.7), motor gasoline (p.9), distillate fuel oil (p.11), and residual fuel oil (p.13) provide the reader with actual inventory data compared to an "average range" from the most recent 3-year period running from January through December or from July through June. The ranges are updated every six months in April and October. The 3-year period is adjusted by dropping the oldest 6 months and including the most recent 6 months. The ranges also reflect seasonal variation determined from a longer time period. The seasonal factors, which determine the shape of the upper and lower curves, are updated annually in October, using the most recent year's final monthly data.

The monthly seasonal factors are estimated by means of a seasonal adjustment technique developed at the Bureau of Census (Census X-11). The seasonal factors are assumed to be stable (i.e., unchanging from year to year) and additive (i.e., the series is deseasonalized by subtracting the seasonal factor for the appropriate month from the reported inventory levels). The intent of deseasonalization is to remove only annual variation from the data. Thus, deseasonalized series would contain the same trends, cyclical components, and irregularities as the original data. The seasonal factors were derived using monthly data from 1978-1984.

After seasonal factors are derived, data from the most recent 3-year period (January-December or July-June) are deseasonalized. The average of the deseasonalized 36-month series determines the midpoint of the deseasonalized average band. The standard deviation of the deseasonalized 36-months is calculated adjusting for extreme data points. The upper curve of the "average range" is defined as the average plus the seasonal factors plus the standard deviation. The lower curve is defined as the average plus the seasonal factors minus the standard deviation. Thus, the width of the "average range" is twice the standard deviation. The values of the upper and lower curves are presented in the table below.

Values of Average Ranges in Inventory Graphs  
(Millions of Barrels)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Lower Range												
Total Petroleum	1037.1	1021.7	994.2	994.9	1007.5	1016.9	1036.2	1049.5	1063.4	1069.9	1077.4	1043.3
Crude Oil	330.9	331.9	332.8	337.1	335.9	333.7	327.5	326.6	323.1	330.7	329.8	322.8

Distillate Fuel Oil	118.4	106.2	87.5	80.6	86.8	99.2	117.6	132.6	145.0	149.7	153.1	140.8
Residual Fuel Oil	45.1	40.1	37.7	37.9	41.9	40.4	41.9	41.7	45.8	48.1	50.9	51.3
Upper Range												
Total Petroleum	1103.2	1087.8	1060.3	1061.0	1073.6	1083.0	1102.3	1115.6	1129.5	1136.0	1143.5	1109.4
Crude Oil	352.4	353.3	354.3	358.6	357.3	355.2	348.9	348.1	344.5	352.1	351.2	344.3
Motor Gasoline	257.4	258.6	253.9	243.8	237.3	235.0	234.8	231.6	234.2	229.4	235.0	241.1
Distillate Fuel Oil	138.9	126.7	108.0	101.1	107.3	119.7	138.1	153.1	165.5	170.2	173.6	161.3
Residual Fuel Oil	54.3	49.3	46.9	47.1	51.1	49.6	51.1	50.9	55.0	57.3	60.1	60.5

#### Minimum Operating Inventories

The lines labeled "Minimum Operating Inventory" (MOI) on the stocks graphs for crude oil and motor gasoline represent estimates of those inventory levels made by the National Petroleum Council (NPC) and published in November 1983 in "Petroleum Inventories and Storage Capacity -- An Interim Report." The NPC defines the MOI as the inventory level below which operating problems and shortages would begin to appear in a defined distribution system. The NPC report presents the findings of a study which was directed by the NPC's Committee on Petroleum Inventories and Storage Capacity. MOI estimates presented in the report were developed by consensus through a decision-making process that

relied on the judgement of Committee members based on their operating experience, on historical inventory trends, and on the results of an NPC survey of companies that provide primary inventory data to the Energy Information Administration (EIA). The estimated values are: crude oil -- 285 million barrels; and motor gasoline -- 200 million barrels. Prior to April 24, 1986, the EIA also published MOI estimates for both distillate fuel oil (105 million barrels) and residual fuel oil (40 million barrels) stocks.

EIA currently publishes "observed minimum" levels on its "Stocks of Crude Oil and Petroleum Products, U.S. Total" graph as well as on graphs of "Stocks of Residual Fuel Oil, U.S. Total" and "Stocks of Distillate Fuel Oil, U.S. Total". These observed minimums are the lowest inventory levels observed during the most recent 36-month period as published in the Petroleum Supply Monthly.

#### Appendix C

##### PROJECTIONS FROM THE SHORT-TERM ENERGY OUTLOOK, JULY 1986

The projections of "high" and "low" total petroleum demand, shown in the WPSR as total products supplied, are from the Office of Energy Markets and End Use, Short-Term Energy Outlook (Outlook), July 1986. The three forecast cases presented in this edition of the Outlook, with projections for the last half of 1986, and for 1987, are based on different assumptions about the price of imported crude oil to U.S. refiners. The economic forecasts in the low price and high price cases reflect the impact on the base case assumptions of the low and high price paths.

In the low price case:

- ° One year growth in the real Gross National Product (GNP) is projected to be 2.4 percent for 1986 and 3.0 percent for 1987.
- ° U.S. refiner acquisition costs of imported crude oil are assumed to average \$13.40 per barrel in 1986, and then rise to an average of \$14.30 per barrel in 1987, in current dollars.

In the base case:

- ° One year growth in the GNP is projected to be 2.4 percent for 1986 and 2.9 percent for 1987.
- ° U.S. refiner acquisition costs of imported crude oil are assumed to average \$14.70 per barrel in 1986, and \$16.30 per barrel in 1987, in current dollars.

In the high price case:

- ° One year GNP growth is projected to be 2.4 percent for 1986 and to be 2.6 percent for 1987.
- ° U.S. refiner acquisition costs of imported crude oil are assumed to average \$17.00 per barrel in 1986, and \$20.80 per barrel in 1987, in current dollars.

The plots of the low and high product supplied estimates incorporate an additional sensitivity adjustment for weather, as estimated in the Short-Term Energy Outlook, Table 13.

For more detailed information on the above (and other components of the forecast), please refer to the published report, Short-Term Energy Outlook, July 1986.

Copies of the report are available from:

National Energy Information Center

1000 Independence Avenue, S.W.  
Washington, D.C. 20585  
Telephone 202-252-8800

Appendix D  
CALCULATION OF WORLD OIL PRICE

The weighted average international price of oil, shown in the "Highlights" on page 1 and on page 18, is an average calculated using specific crude oil prices weighted by the estimated crude oil export volume for each oil-producing country. To develop the table shown on page 18, a list of major oil producing/exporting countries was chosen. For each country, the contract selling price of one or more representative crude oils was determined by investigating a number of industry publications (i.e., "Oil Buyers' Guide", "Platt's Oilgram Price Report", "Petroleum Intelligence Weekly", and "Weekly Petroleum Argus") and by contacting oil market analysts.

Then, the appropriate crude oil volumes to be used as weighting factors for each country were determined. These volumes are estimates based on a number of sources which provide data on production, consumption, and exports for these countries. Export volumes for a number of smaller producing/exporting countries, not listed in the table, are included in the weighting factors. After the export volumes had been determined, simple mathematical weighted averages were calculated to arrive at the "Total OPEC," "Total Non-OPEC," and "Total World" prices.

The average United States (FOB) import price is derived by the same basic procedure as the world oil price, that is, taking the representative contract crude oil price of a specific crude oil from a particular country and weighting this price by a certain volume of crude oil. In this case, the weighting factors are the volumes of crude oil imported into the U.S. from pertinent countries. Import volumes from a number of smaller producing/exporting countries, not listed in the table, are included in the weighting factors.

Both the import and export volumes are preliminary. Due to their origin, these estimates cannot be fully verified. These volumes are updated monthly, or more frequently when changes in oil market conditions make updating appropriate.

Appendix E  
EXPLANATION OF SPOT MARKET PRODUCT PRICES

Definition of spot market product prices for the Rotterdam market: Represent the mid point of the bid/asked price range for CIF cargoes scheduled for prompt arrival at Rotterdam (within 48 hours).

Definition of spot market product prices for the New York market: Represent last sale price reported or offered. Prices are ex-duty and do not include Federal or state taxes.

General definition of spot prices: A transaction concluded "on the spot," that is, on a one-time prompt delivery basis, usually referring to a transaction involving only one cargo of product. This contrasts with a term contract sale which obligates the seller to furnish product on an evenly-spread delivery basis over an extended period of time, usually for one year.

## GLOSSARY

- o **Barrel.** A volumetric unit of measure for crude oil and petroleum products equivalent to 42 U.S. gallons.
- o **CIF.** Literally, "Cost, Insurance, Freight". This term refers to a type of sale in which the buyer of the product agrees to pay a unit price that includes the FOB value of the product at the point of origin plus all costs of insurance and transportation. This type of a transaction differs from a "Delivered" purchase, in that the buyer accepts the quantity as determined at the loading port (as certified by the Bill of Lading and Quality Report) rather than pay based on the quantity and quality ascertained at the unloading port. It is similar to the terms of an FOB sale, except that the seller, as a service for which he is compensated, arranges for transportation and insurance.
- o **Cooling Degree-Days.** The number of degrees per day the daily average temperature is above 65 degrees F. The daily average temperature is the mean of the maximum and minimum temperature for a 24-hour period.
- o **Crude Oil.** A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Lease condensate and drips are included but topped crude oil (residual) and other unfinished oils are excluded.
- o **Crude Oil Input.** The total crude oil put into processing units at refineries.
- o **Degree-Day Normals.** Simple arithmetic averages of monthly or annual degree-days over a long period of time (usually the 30-year period 1951-1980). These may be simple degree-day normals or population-weighted degree-day normals.
- o **Distillate Fuel Oils.** Includes No. 1, No. 2, and No. 4 fuel oils, and No. 1, No. 2, and No. 4 diesel fuels. These are light fuel oils used primarily for home heating, as a diesel engine fuel (including railroad engine fuel and fuel for agricultural machinery), and for electric power generation.
- o **FOB.** Literally, "Free On Board". Pertains to a transaction whereby the seller makes the product available within an agreed on period at a given port at a given price; it is the responsibility of the buyer to arrange for the transportation and insurance.
- o **Gasoil.** European designation for No. 2 heating oil, and diesel fuel.
- o **Gross Inputs.** The crude oil, unfinished oils, and natural gas plant liquids put into distillation units.
- o **Heating Degree-Days.** The number of degrees per day the daily average temperature is below 65 degrees F. The daily average temperature is the mean of the maximum and minimum temperature for a 24-hour period.
- o **Imports.** Unless otherwise specified in this report, refers to gross imports. Imports of minor products ("other oils") include aviation gasoline, kerosene, unfinished oils, liquefied petroleum gases, plant condensate, petrochemical feedstocks, lube oils, waxes, special naphthas, coke, asphalt, and other miscellaneous oils.
- o **Jet Fuel.** Includes kerosene-type jet fuel and naphtha-type jet fuel. Kerosene-type jet fuel is a kerosene quality product used primarily for commercial turbojet and turboprop aircraft engines. Naphtha-type jet fuel is a fuel in the heavy naphthas range used primarily for military turbojet and turboprop aircraft engines.
- o **Motor Gasoline.** Finished leaded gasoline, finished unleaded gasoline, and blending components in the gasoline range. Production data represent finished leaded gasoline and finished unleaded gasoline. Stocks and imports data consist of the two types of finished gasoline and blending components. Stock change used in the calculation of motor gasoline product supplied is the change in finished motor gasoline stocks.
- o **Operable Capacity.** The maximum amount of input that can be processed by a crude oil distillation unit in a 24-hour period, making allowances for processing limitations due to types and grades of inputs, limitations of downstream facilities, scheduled and unscheduled downtimes, and environmental constraints. Includes any shutdown capacity that could be placed in operation within 90 days.
- o **Petroleum Administration for Defense Districts (PADD).** Five geographical areas into which the nation was divided by the Petroleum Administration for Defense for purposes of administration. These PADDs include the states listed below:
  - PADD 1:** Connecticut, Delaware, District of Columbia, Florida, Georgia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia.
  - PADD 2:** Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, and Wisconsin.
  - PADD 3:** Alabama, Arkansas, Louisiana, Mississippi, New Mexico and Texas.
  - PADD 4:** Colorado, Idaho, Montana, Utah, and Wyoming.
  - PADD 5:** Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.

- o **Population-Weighted Degree-Days.** Heating or cooling degree-days weighted by the population of the area in which the degree-days are recorded. To compute State population-weighted degree days, each State is divided into from one to nine climatically homogeneous divisions which are assigned weights based on the ratio of the population of the division to the total population of the State. Degree-day readings for each division are multiplied by the corresponding population weight for each division and these products are then summed to arrive at the State population-weighted degree-day figure. To compute national population-weighted degree-days, the Nation is divided into nine Census regions comprised of from three to eight States which are assigned weights based on the ratio of the population of the region to the total population of the Nation. Degree-day readings for each region are multiplied by the corresponding population weight for each region and these products are then summed to arrive at the national population weighted degree-day figure.
- o **Product Supplied.** A value calculated for specific products which is equal to domestic production plus net imports (imports less exports), less the net increase in primary stocks. Total products supplied is calculated as inputs to refineries, plus estimated refinery gains, plus other hydrocarbon input, plus product imports, less product exports, less the net increase in product stocks. Values shown for "Other Oils" product supplied are the difference between total product supplied and product supplied values for specified products. Other oils product supplied incorporates crude oil product supplied and reclassified product adjustment.
- o **Refiner Acquisition Cost of Crude Oil.** The average price paid by refiners for crude oil booked into their refineries in accordance with accounting procedures generally accepted and consistently and historically applied by the refiners concerned. Domestic crude oil is that oil produced in the United States or from the outer continental shelf as defined in 43 USC Section 1131. Imported crude oil is any crude oil which is not domestic oil. The composite is the weighted average price of domestic and imported crude oil. Prices do not include the price of crude oil for the SPR.
- o **Refinery Capacity Utilization.** Ratio of the total amount of crude oil, unfinished oils, and natural gas plant liquids run through crude oil distillation units to the operable capacity of these units. In the period 1979-1984 the refinery capacity utilization for all U.S. refineries ranged between 87 percent and 65 percent. The ratio for an individual refinery may fluctuate much more depending on the type of crude and other raw materials processed, the types of products produced, and the operating conditions of the refinery.
- o **Residual Fuel Oils.** Includes No. 5 and No. 6 fuel oils which are heavy oils used primarily for electric power generation, for industrial and commercial space heating, as a ship fuel, and for various industrial uses.
- o **Retail Motor Gasoline Prices.** Motor gasoline prices calculated each month by the Bureau of Labor Statistics (BLS) in conjunction with the construction of the Consumer Price Index (CPI). These prices are collected in 85 urban areas selected to represent all urban consumers--about 80 percent of the total U.S. population. The service stations are selected initially, and on a replacement basis, in such a way that they represent the purchasing habits of the CPI population. Service stations in the current sample include those providing all types of service (i.e., full-, mini-, and self-service).
- o **Stock Change (Refined Products).** Component of Product Supplied calculation shown on U.S. Petroleum Balance. The product stock change shown on the U.S. Petroleum Balance Sheet for the current 4-week period is calculated in the following way; an average daily stock change is calculated for major refined products (i.e., all actual reported stocks); this stock change is added to an estimate for minor product stock change based on historical monthly data; a daily average stock change for refined product stocks for the 4-week period is then calculated. To calculate minor product stock change, the stock levels shown for other oils in the stock section of the balance sheet are used. These other oils stock levels are derived by: 1) computing an average daily rate of stock change for each month based on monthly data for the past six years; 2) using this daily rate and the minor stock levels from the most recent monthly publication to estimate the minor product stock level for the current period.
- o **Stocks.** For individual products in the WPSR, quantities held at refineries, in pipelines, and at bulk terminals which have a capacity of 50 thousand barrels or more, and in transit thereto. Stocks held by product retailers and resellers, as well as tertiary stocks held at the point of consumption, are excluded. Stocks of individual products held at gas processing plants are excluded from individual product estimates but included in "Other Oils" estimates and "Total."
- o **Unaccounted-for Crude Oil.** A term which appears in U.S. Petroleum Balance Sheet. It reconciles the difference between data (or estimates) about supply and data (or estimates) about disposition. Its value can be positive or negative since it is a balancing term. As it appears in the monthly publications, it reflects the accuracy of the reported data. Because the unaccounted-for crude oil figure reflects the accuracy of reported and estimated figures, one would expect the figure to be larger in balances using preliminary or estimated data and smaller in balances using final data. In fact, the published figures confirm this expectation. In the WPSR, four-week averages for the previous year are interpolated from final monthly data, so that the unaccounted-for crude oil value for the previous year is considerably smaller than that for the current period.
- o **United States.** For the purpose of the report, the 50 states and the District of Columbia. Data for the Virgin Islands, Puerto Rico, and other U.S. territories are not included in the U.S. Totals.

Energy Information Administration  
Electronic Publication System (EPUB)  
User Instructions

Selected Weekly Petroleum Status Report (WPSR) and Petroleum Supply Monthly (PSM) statistics are now available electronically on the Energy Information Administration (EIA) Computer Facility. Public access to these machine readable statistics is possible by dialing (202) 252-8658 for 300 baud or 1200 baud line speeds. Communications are Asynchronous and require a standard ASCII-type terminal. There is no charge for this service. Although there is not a required password, you will be requested to use your telephone number as a user identifier. This service is available 7 days per week (8:00 a.m. - 11:00 p.m., Monday thru Friday, 10:00 a.m. - 6:00 p.m., weekends and holidays). Weekly statistics are updated on Wednesday (Thursday in the event of a Holiday) after 5:00 p.m. Monthly data for the current available month is also provided and is updated by 5:00 p.m. on the 24th of the month. Questions or comments should be directed to T.C. Swann at (202) 252-1155.

Access Instructions:

- 1) DIAL (202) 252-8658
- 2) HIT RETURN (CARRIAGE RETURN) TWO OR THREE TIMES UNTIL THE  
EPUB BANNER APPEARS

```
***                                     ***
***                                     ***
***          WELCOME TO THE           ***
***          ENERGY INFORMATION      ***
***          ADMINISTRATION           ***
***          ELECTRONIC PUBLICATION  ***
***                                     ***
```

- 3) SELECT THE STATISTICS YOU WISH FROM THE MENU  
  
THE FOLLOWING REPORTS ARE AVAILABLE.  
WPSR - WEEKLY PETROLEUM STATUS REPORT  
PSMR - PETROLEUM SUPPLY MONTHLY  
STKS - PSM STATE STOCKS TABLE  
WCPR - WEEKLY COAL PRODUCTION REPORT  
PLEASE ENTER THE DESIRED REPORT ID... WPSR

- 4) ENTER YOUR 10 DIGIT PHONE NUMBER  
  
\$WP1081 LOGON IN PROGRESS AT 13:23:22 ON MAY 9, 1984  
PLEASE ENTER YOUR PHONE NUMBER...

- 5) YOU WILL THEN SEE A BANNER WHICH SHOWS THE REPORT YOU HAVE SELECTED AND PAUSES TO  
ALLOW AMPLE TIME TO GET READY TO RECEIVE OUTPUT

YOU HAVE SELECTED WEEKLY STATISTICS FROM THE  
WEEKLY PETROLEUM REPORTING SYSTEM. THIS  
SYSTEM WILL DISPLAY THE LATEST U.S. PETROLEUM  
BALANCE SHEET AND THE MOST RECENT 5 WEEKS OF  
WEEKLY PETROLEUM STATUS REPORT DATA. PLEASE  
TURN ON YOUR PRINTER NOW IF YOU WISH TO OBTAIN  
HARD COPY OUTPUT.

(PRINTING WILL BEGIN IN 20 SECONDS)
